B.S in Construction Management	May 2010

Lawrence Technological University, Southfield, MI

Colt Stacer has always strived to encourage students to find their purpose. In 2019, he started Stacer Group with one goal, being the ultimate catalyst for every student to find a purpose that raises individual self-worth through accountability and achievement.

Over a decade ago, Colt started in the education industry as a member of an Advisory Board for students pursuing CTE programs in Oakland County, Michigan as an industry partner representing Automation & Modular Components. In 2017 he moved to Texas with the goal of expanding student offerings in a new market. Since his move he has taught TEA approved dual credit college coursework, worked with over 20 P-TECH schools to develop sustainable program infrastructure, provided consulting services to CTE directors across the state of Texas, spoke at educational conferences on industry partnership relationships, and started the development of innovative software to further expand student achievement.

As an industry partner, Colt previously was a leader at Brock Solutions, an engineering solutions company. His focus within the company was providing customers with airport baggage handling systems across the United States. His most recent accomplishment was the Go Live of DELTA SKYWAY at LAX in August 2023. His last major project was San Diego Airport Terminal 1. In addition, he was responsible for the sr. program management of the United Airlines account, at the time Brocks largest account. Prior to Brock Solutions he worked in the automotive, warehouse distribution and industrial automation industries. In addition, he previously owned Stacer Concepts LLC, an engineering and manufacturing business.

Colt resides with his wife, Jackie, and three dogs in Fort Worth, TX.
